

Izzac Haug

BACKEND DEVELOPER | SOFTWARE ENGINEER

GitHub: <https://github.com/HaugI123>

Portfolio: <https://haugi123.github.io/>

EDUCATION

Bachelor of Science in Computer Science (Senior)
University of North Carolina at Pembroke
– Expected 31/DEC/2026

OBJECTIVE

Entry-level software engineer with a focus on backend development, automation, and systems programming. Experienced with Python, JavaScript, and Linux, and seeking an opportunity to build practical, real-world software while growing as a developer.

PROJECTS

customMQL5 – Algorithmic Trading Engine

- Designed and implemented an algorithmic trading engine using MQL5 with modular strategy and risk management components
- Built systems for trade execution, indicator analysis, and market data processing
- Currently developing probabilistic learning features to dynamically adjust trading strategies

FUNCTIONAL SKILLS

- **Languages:** Python, JavaScript, MQL5, Java
- **Technologies:** Linux, Git, REST APIs, React Native
- **Areas:** Backend Development, Automation, Data Processing, Systems Programming

theNutritionist – Full-Stack Mobile App (WIP)

- Developing a cross-platform nutrition tracking app using React Native and backend APIs
- Implementing user authentication, food logging, and goal tracking systems
- Designed backend architecture for handling user data and real-time updates

ViewBot – Discord Automation Bot (Contributor)

- Developed backend logic for a Discord automation tool using Python and Discord API

- Implemented command handling, task automation, and API integrations
 - Collaborated within a small development team under an LLC structure
-

GPU-Calc - Backend System (Contributor)

- Built backend services for a GPU performance calculator web application
 - Configured HTTPS, domain setup, and deployment infrastructure
 - Implemented server-side logic for processing hardware performance data
-

Network Graph Analyzer

- Developed a Python-based system for analyzing graph/network relationships
- Implemented data parsing (CSV/JSON), edge mapping, and visualization logic
- Applied graph algorithms to analyze and interpret structured data
